

## Star Event: From chaos to control

**When undesired events occur, it's a chaotic situation. With Star Event you can stay on top of the situation and gain full control over activities and actions involved after an undesired event occurs and until remedial actions have been implemented.**

Star Event is designed to assist onboard personnel in reporting safety observations and events, follow-up and implement corrective and preventive actions. The system facilitates easy and efficient distribution of safety routines and instructions to ensure company and industry standards are complied with.

### **Safety observations**

Star Event allows for preventive safety reporting by the use of Safety Observation Cards (SOC). SOC's are used on a daily basis to report safety observations, positive or negative, and is an important step in improving the safety culture throughout the organization.

### **Event reporting**

Star Event enables efficient reporting of non-conformities, near-misses and accidents. Wizards and templates makes reporting quick and easy; allowing for fundamental details to be reported immediately, even in stressed situations. Companies can pre-define the amount of information required to report an incident, such as risk matrix, basic cause, consequence details, etc.

### **Event follow up**

Star Event facilitates for follow up of reported events including implementation of corrective and preventive actions. Events requiring follow up can be linked with near-misses or accidents, or with non-conformities following a vessel inspection or audit. Corrective and remedial actions can be distributed across the fleet to improve fleet safety, and safety routines and instructions can be updated accordingly.

### **User friendly**

Star Event's graphical user interface facilitates easy learning, understanding and usage. Wizards and nomenclature used in the system can be configured to match company and industry standards.

### **Use Star Event to:**

- Create and distribute safety routines and instructions
- Report safety observations and non-conformities
- Report near-misses and accidents, consequences and potential consequences
- Follow up events and non-conformities and implement corrective actions
- Distribute corrective actions across the fleet to improve fleet safety
- Compare safety performance across the fleet
- Provide reports, statistics, and KPIs
- Replicate data between vessel and office
